PATENT APPLICATION

April 15, 1971

To: Mr. Manabu Sasaki, Chief, Patent Agency.

1. Name of the invention:

Glove.

2. Inventor:

Same as the applicant.

3. Applicant:

Hirosuke Onodera 200 Aramoto-cho Osaka-shi, Japan

4. Proxy:

Hiroyuki Kamada 31, 1-chome Nihonbashi-suji Minami-ku Osaka-shi, Japan.

1. Name of the invention:

Glove.

2. Scope of the invention applying for a patent:

This invention concerns with the gloves which are made up with the flexible metal wires.

Description

3. Detailed explanation of the invention:

This invention provides the gloves for safety to be worn at handling edged tools or cutlery without hurting the hands. The body of the gloves (1) as shown in the figure is made up with the flexible wires, such as stainless wire twine or single stainless wire. The material wire should be of anti-corrosive and should be knitted for high productivity, efficiency and workability.

Best Available Copy

The gloves by this invention give hands the protection from being cut by blades in breaking-up operation of meat or marine products, and at the same time contribute also to higher productivity. These gloves also will be found to be useful in various places in factories. The flexibility of the gloves will not give any hindrance to workability.

4. Explanation of the figure:

1

(1) in the figure is the front view of the body of the glove.
